

English moral-emotion terms: translation correspondences

English term	Domain	Russian renderings (attested in the examples)	Sense range driving the dispersion
<i>shame</i>	Shame	<i>styď</i> ‘shame’ (стыд / стыдно / стыдиться) — dominant (≈483); <i>pozor</i> ‘disgrace, public shame’ (≈129); <i>sram</i> ‘shame, disgrace (stronger)’ (≈36); <i>posramit’</i> ‘to put to shame’ (≈11); <i>postyďnyj</i> ‘shameful’ (≈10); occasional <i>smuščenje</i> / <i>stesnenie</i> / <i>nelovkost</i> ‘embarrassment, awkwardness’. Idiomatic (not an emotion token): (<i>it’s a / what a shame</i> → <i>žal’</i> / <i>žalko</i> ‘too bad, a pity’ (≈106), <i>dosada</i> ‘annoyance’ (≈16).	Splits the felt emotion (→ <i>styď</i>) from public disgrace (→ <i>pozor</i> / <i>sram</i>); the evaluative idiom “it’s a shame” = too bad (→ <i>žal’</i>). The headword search also catches the homograph <i>sham</i> ‘fake’ → <i>prytvorstvo</i> , <i>fal’šivyyj</i> .
<i>ashamed</i>	Shame (felt)	<i>styďno</i> / <i>styďit’sja</i> / <i>styď</i> ‘be ashamed’ — dominant (≈767); <i>sovestno</i> ‘be ashamed (conscience-tinged)’ (≈66); <i>stesnjat’sja</i> ‘be shy / self-conscious’ (≈32); <i>nelovko</i> ‘feel awkward’ (≈24); <i>pozor</i> ‘disgrace’ (≈19); <i>smuščenje</i> ‘embarrassment’ (≈16).	Concentrates on the <i>styď</i> -root; <i>sovestno</i> adds a conscience nuance; tails off into shyness / awkwardness at the mild end.
<i>embarrass</i> (-ed / -ment)	Shame (social / mild)	<i>smuščenje</i> / <i>smutit’sja</i> ‘embarrassment, confusion’ — dominant (≈298 + 67); <i>nelovkost’</i> / <i>nelovko</i> ‘awkwardness’ (≈140); <i>stesnenie</i> / <i>stesnjat’sja</i> ‘self-consciousness’ (≈62); <i>konfuz</i> ‘embarrassing mishap’ (≈32); <i>neudobno</i> ‘awkward, inconvenient’ (≈30); <i>zamešatel’stvo</i> ‘fluster, confusion’ (≈24); <i>rasterjannost’</i> ‘bewilderment’ (≈17); <i>zatrudnenie</i> ‘difficulty, (financial) embarrassment’ (≈15).	The most lexically split term, with no single equivalent; the financial sense (“embarrassment of riches”, “financially embarrassed”) → <i>zatrudnenie</i> / <i>zatrudnitel’noe položenie</i> .
<i>guilt</i> / <i>guilty</i>	Guilt	<i>vina</i> / <i>vinovatyj</i> / <i>vinovnyj</i> ‘fault, blame, guilty’ — dominant (≈437); <i>greh</i> ‘sin’ (≈19); <i>raskajanie</i> ‘remorse’ (≈14); <i>ugryzenija</i> (<i>sovesti</i>) ‘pangs of conscience’ (≈13); <i>provinnost’</i> ‘wrongdoing’ (rare).	Forensic and felt guilt both ride <i>vina</i> / <i>vinovat</i> ; the affective edge recruits <i>ugryzenija sovesti</i> and <i>raskajanie</i> , while <i>greh</i> moralises it as sin.
<i>conscience</i>	Conscience	<i>sovest’</i> ‘conscience’ — near one-to-one, dominant (≈862); <i>soznanie</i> / <i>soznavat’</i> ‘consciousness, awareness’ (≈46); <i>dobrosovestnyj</i> ‘conscientious’ (rare).	The tightest mapping in the set (≈ <i>sovest</i>). The only real scatter is the English search conflating <i>conscience</i> with <i>consciousness</i> (→ <i>soznanie</i>); <i>conscientious</i> → <i>dobrosovestnyj</i> .
<i>honor</i> / <i>honour</i> (able)	Honor	<i>čest’</i> / <i>čestnyj</i> / <i>čestnost’</i> ‘honour; honest(y)’ — core, dominant (≈567); <i>počėt</i> ‘esteem, honour’ (≈70), <i>počesti</i> ‘honours, tributes’ (≈40); <i>slava</i> ‘glory’ (≈28); <i>počitat’</i> / <i>čtit’</i> ‘to honour, revere’ (≈30); <i>udostoit’</i> ‘to honour, deem worthy (of)’ (≈20); <i>uvaženie</i> ‘respect’ (≈16); <i>dostoinstvo</i> ‘dignity’ (≈12); <i>počtenie</i> ‘deference’ (≈10); <i>čestoljubie</i> ‘love of honour, ambition’ (≈2).	The widest cluster — inner integrity (<i>čest’</i> / <i>čestnyj</i>), conferred esteem & glory (<i>počėt</i> / <i>počesti</i> / <i>slava</i> / <i>udostoit’</i>), the verb “to honour” (<i>počitat’</i> / <i>čtit’</i>), and dignity / respect (<i>dostoinstvo</i> / <i>uvaženie</i>); honour is frequently omitted or recast.

Notes

- The *shame* field divides the felt emotion (*styď*) from public disgrace (*pozor* / *sram*); the evaluative idiom “(it is a / what a) shame” = ‘too bad’ goes to *žal’* / *dosada* — not a shame token — and “put to shame” to *posramit’*. The headword search also pulls in the homograph *sham* ‘fake’ → *prytvorstvo*, *fal’šivyyj*.

- The noun *shame* is more dispersed than the adjective *ashamed*, which concentrates on the *styd-* root (*stydno*, *stydit'sja*), with *sovestno* as a conscience-tinged variant.
- *embarrass* is the most lexically split term, with no single equivalent: *smuščenje*, *nelovkost*, *stesnenie*, *konfuz*, *zamešatel'stvo*, *rasterjannost*; the financial / “embarrassment of riches” sense goes to *zatrudnenie*.
- *guilt*: forensic and felt guilt both ride *vina* / *vinovat*; the affective edge recruits *ugryzenija sovesti* ‘pangs of conscience’ and *raskajanie* ‘remorse’, and *greh* ‘sin’ moralises it.
- *conscience* is the tightest mapping ($\approx$ *sovest*); the only real scatter is the search conflating *conscience* with *consciousness* → *soznanie*, plus *conscientious* → *dobrosovestnyj*.
- *honor* disperses across the widest Russian set — *čest'* (integrity), *počet* / *počesti* / *slava* (esteem, honours, glory), *počitat'* / *čtit'* / *udostoit'* (the verb ‘to honour, deem worthy’), *dostoinstvo* / *uvaženie* (dignity, respect) — with no single equivalent, paralleling the Kazakh *namys* / *qūrmet* / *abyroj* cluster.
- High no-core-root rates ($\approx$ 28% of *shame*, 35% of *embarrass*, 30% of *honor* examples) reflect paraphrase, omission, and homographs — the same resistance to one-to-one mapping seen on the Kazakh side.
