Notes

- The honor cluster (*namys*, *abyroi*, *qūrmet*) disperses across a wide Russian set — *samoljubie*, *gordost’*, *gordynja*, *dostoinstvo*, *avtoritet*, *uvaženie*, *počēt*, *počesti* — with no single equivalent.
- *abyroi* splits a full lexical sense (reputation/standing → *avtoritet*, *dostoinstvo*) from a bleached idiomatic one (*abyroi boldy* = ‘luckily, thank goodness’), which is not a dignity token at all.
- *kınä* and *ökiniş* divide the guilt field: *kınä* maps to forensic *vina / vinovat*, *ökiniş* to felt *raskajanie / sožalenie / goreč*.
- Several *ūiat* and *ar-ūiat* tokens are omitted or paraphrased rather than rendered — the field’s resistance to one-to-one mapping.
